VERSION 7

SETTING THE STANDARD

BAR CODE LABELING AND INTEGRATION SOFTWARE

# INTRODUCING LABELVIEW™ 7

The Easiest Software is Now More Powerful.

LABELVIEW 7 bar code labeling and integration software gives you the power to design and print bar codes and labels with unmatched ease and flexibility. Even in the most demanding label production applications, you can create and print labels in minutes. LABELVIEW software supports over 44 standard bar code symbologies, 18 multi-dimensional codes, and the ability to print to over 800 thermal/thermal transfer, dot matrix or line bar code printers, as well as to any Windows printer.

New features have been added to LABELVIEW 7 software to help you print labels the way you want them.

**HTML Forms Generator** guides you through the creation of a customized user interface for label printing. You can create and edit forms quickly and easily using common software packages like FrontPage, Microsoft Word and others, giving you complete control of the look of your form.

**Font Downloader** downloads non-resident Windows fonts directly to thermal printers so they appear as printer resident fonts, improving printer speed and output capacity.

**User Manager** gives the administrator the ability to define the access right to label modifications, printing capabilities, database access, interface customization and general use of the software for every user.

**Multiple Document Interface (MDI)** displays several labels at the same time, giving you the ability to work on several files simultaneously and easily copy and past objects between labels.

**Additional Design Tools** have been added for greater design flexibility. In addition to lines and rectangles, the user can now draw circles, ellipses, polygons, oblique lines and rounded rectangles.

**Enhanced Driver and Device Support** for more than 800 models from over 50 manufacturers. The printer drivers are now independent from the label design software itself, which facilitates easier additions and updates to printer drivers and flexibility in programming printer specific options.

**Driver Service Pack** allows you to upgrade printer driver families without upgrading to the next software version. The DSP is accessed from the [www.teklynx.com](http://www.teklynx.com) web site and allows you to download the latest printer drivers to your labeling software directory.

LABELVIEW is one of TEKLYNX's globally recognized label design software solutions, providing you with the flexibility to handle all of your labeling applications – today and in the future.

LABELVIEW 7 incorporates a new design interface that is similar in appearance and operation to other commonly-used Windows-based software
